AgentOS

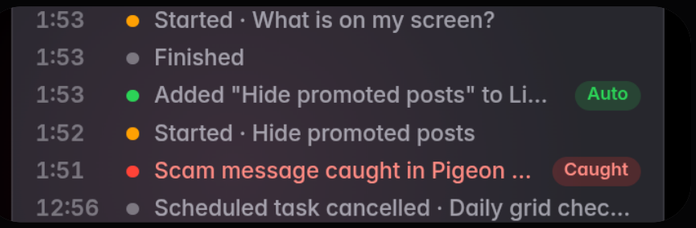

Agent-native Android · live on a $200 phone

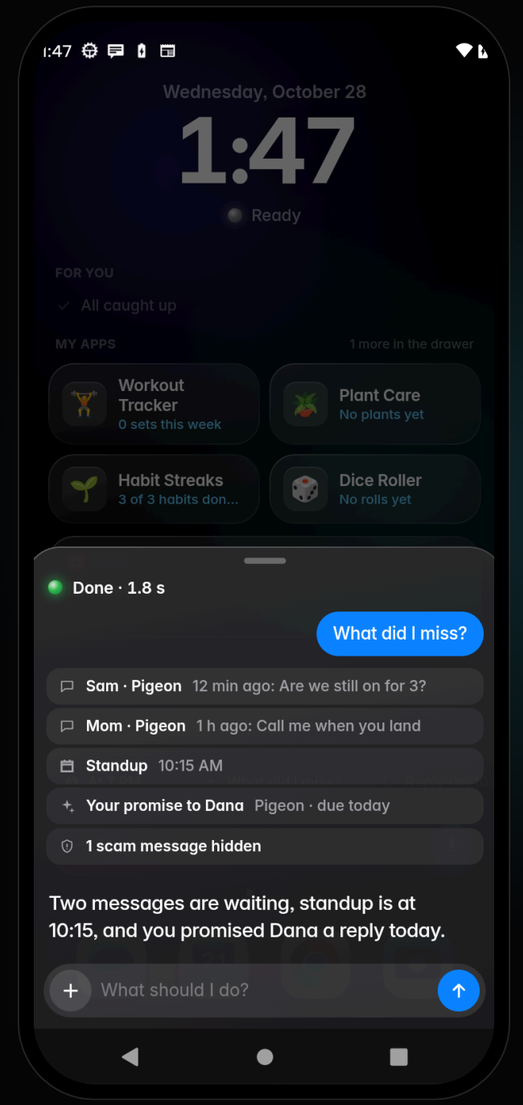

CUE Phone in hand, mirroring on. One line, then straight into the wake word.

"What did I miss?"

Voice wake word + proactive catch-up

- Suspicious message caught, hidden from the agent

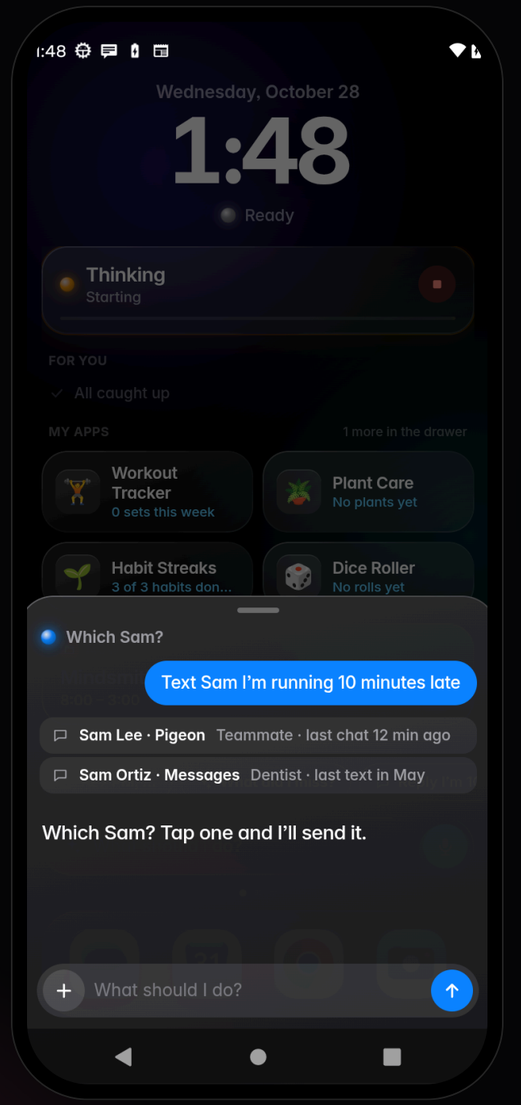

- Messages, calendar, promises

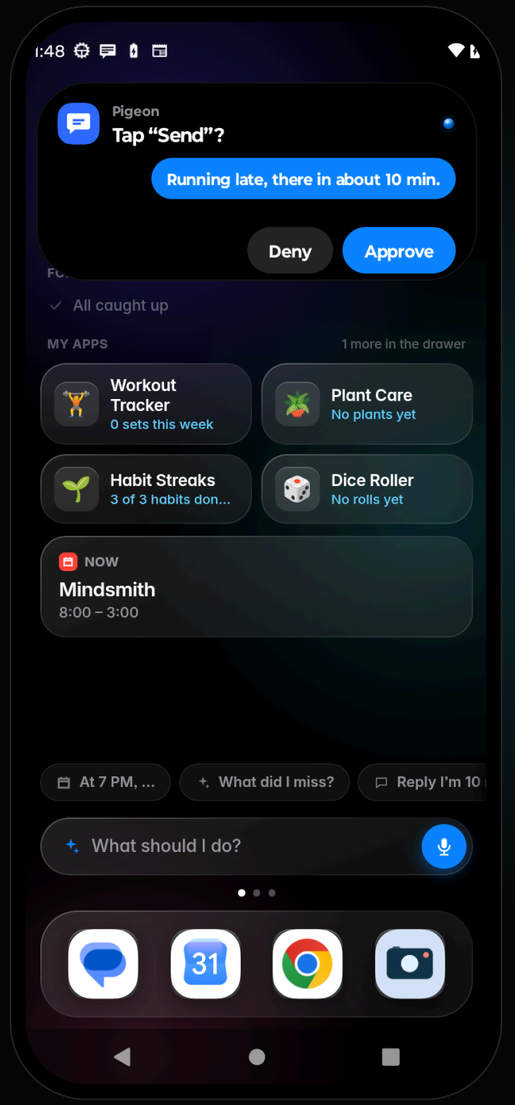

CUE Wake word → "What did I miss?" · point at the hidden scam message.

Text Sam. Which Sam?

Cross-app actions + knowledge graph

● Which Sam? It knows your people

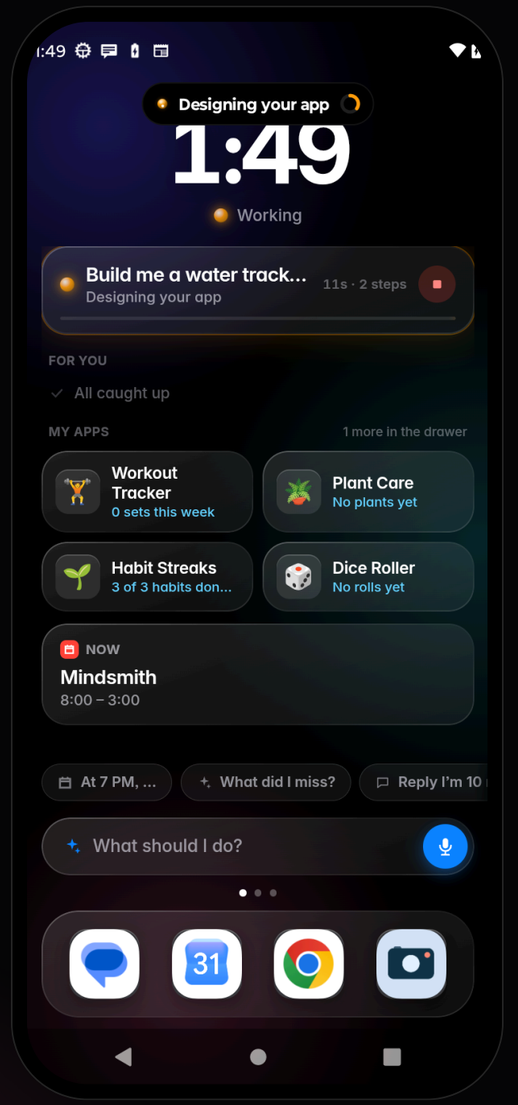

● Approval card · you tap Approve

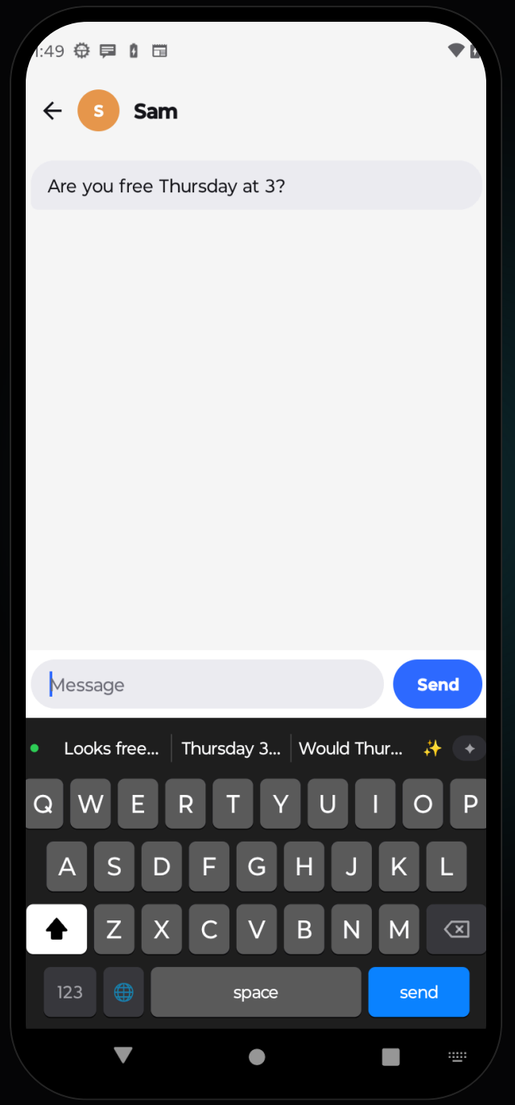

CUE "Text Sam I'm running 10 minutes late" → pick the Sam → tap Approve → read out "Done · N s".

Build an app by asking

Micro-apps + calendar-aware keyboard

● Building in the background

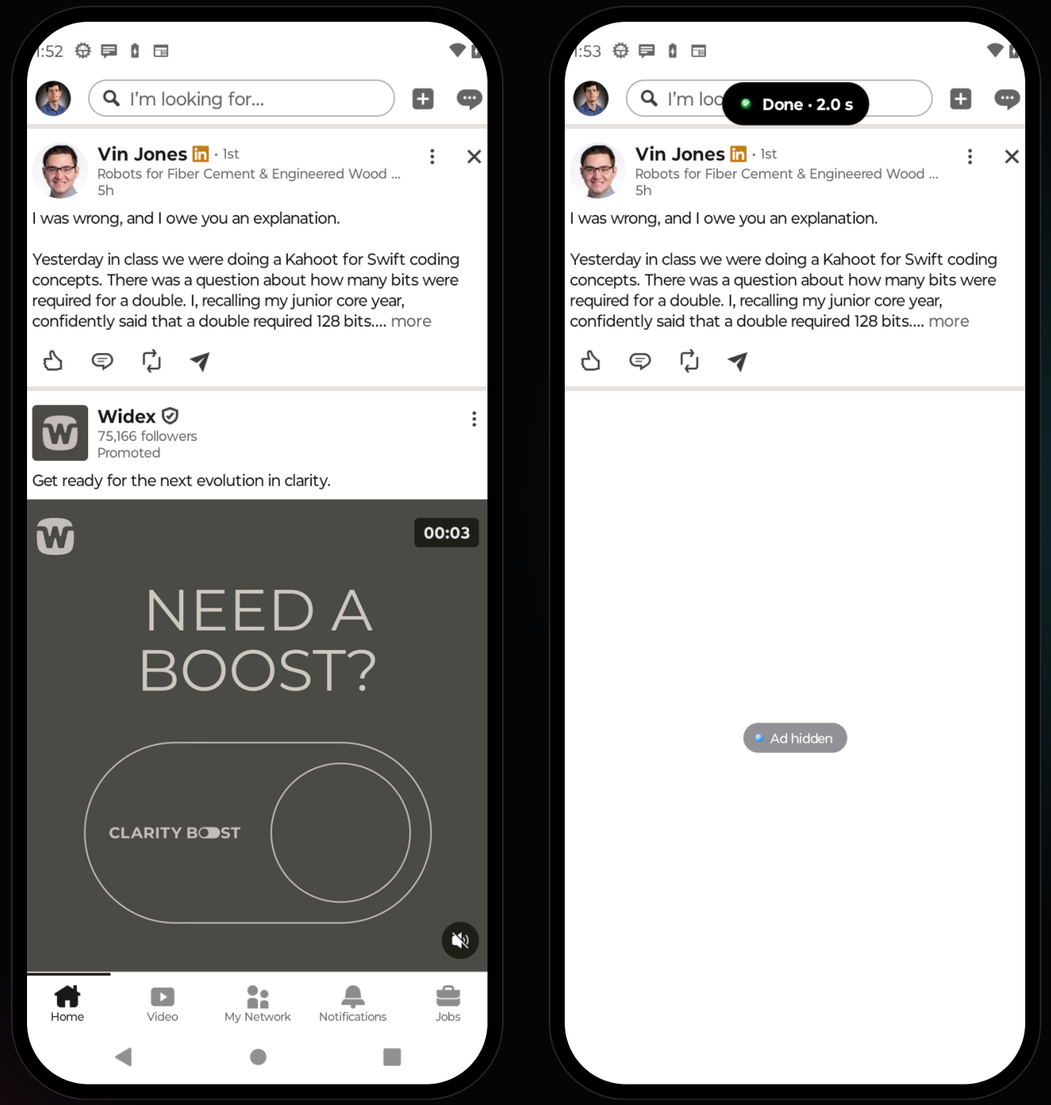

● Calendar-aware replies · Translate

CUE "Build me a water tracker" → open the chat → tap the field: calendar reply chip → Translate. Swipe Home when the app lands.

Change a real app. Live.

Real-time app mods + auto-approval

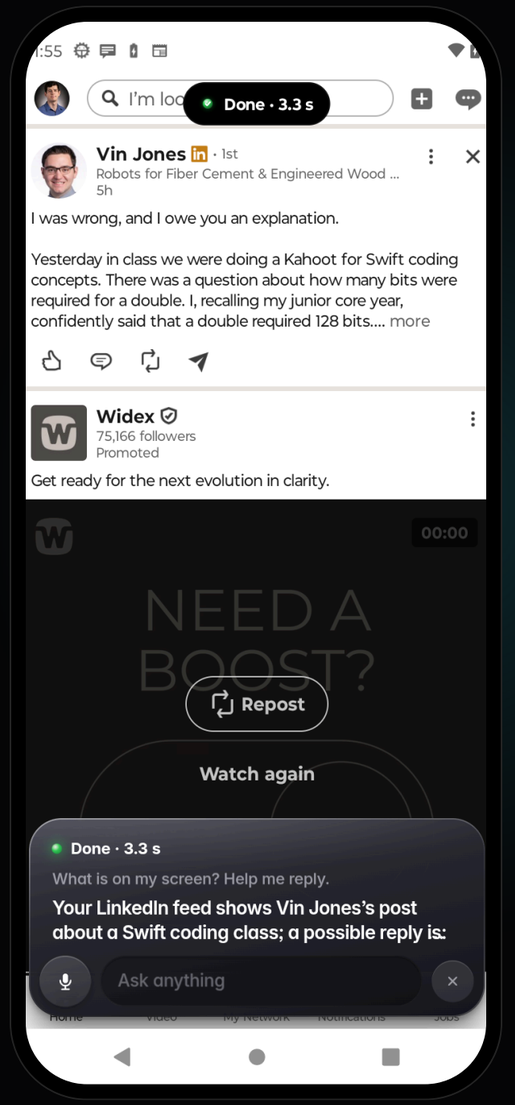

● Before

● "Ad hidden" · Done · 2 s

CUE Open LinkedIn: "Hide promoted posts." While it works: my own words, so it auto-approves; no code runs.

Live talk sees your screen

In-app assistant bar + screen vision

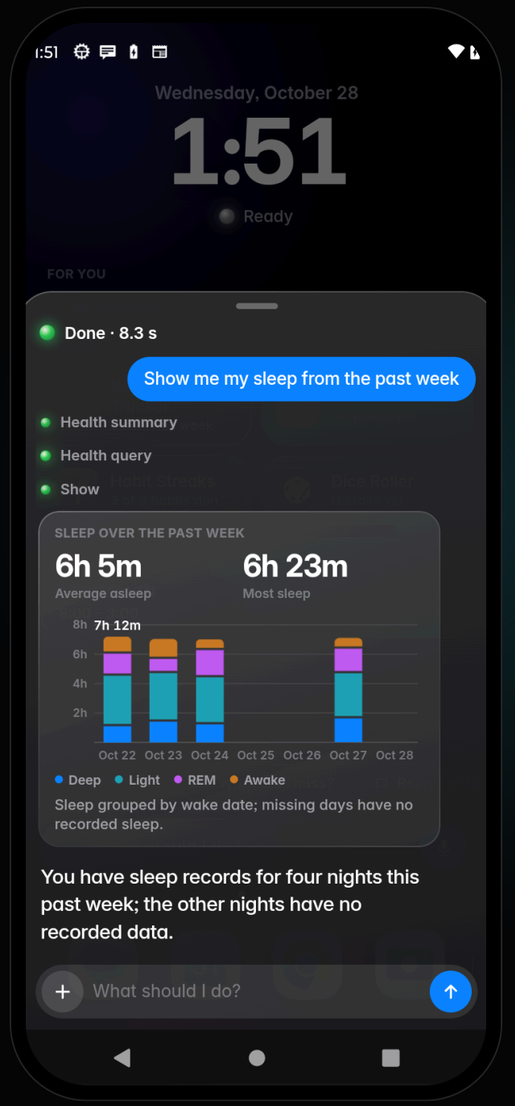

- Reads the screen, then answers

CUE Open voice on the LinkedIn screen: "What's on my screen? Help me reply."

Health from your watch

Galaxy Watch health + visual answers

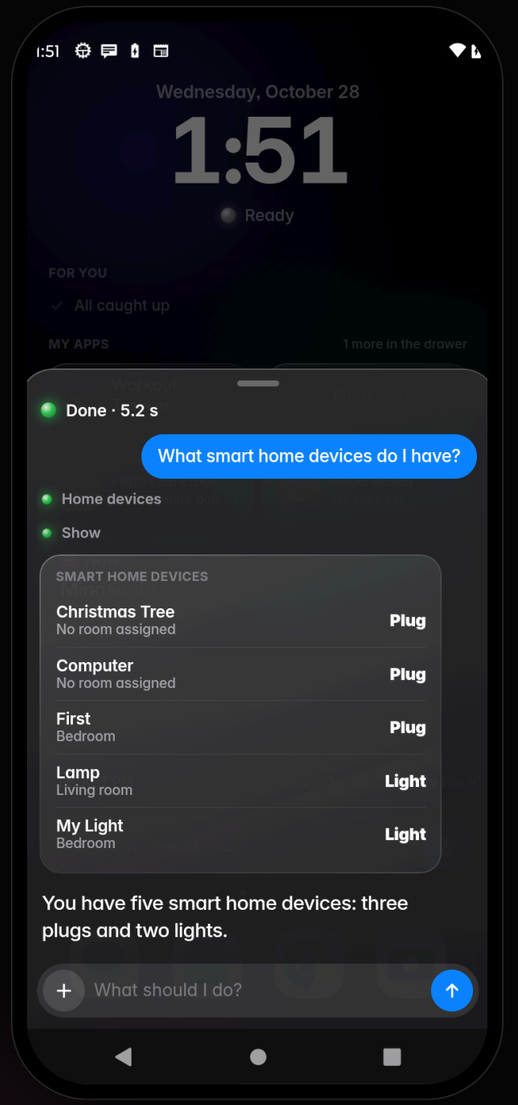

Sleep this week

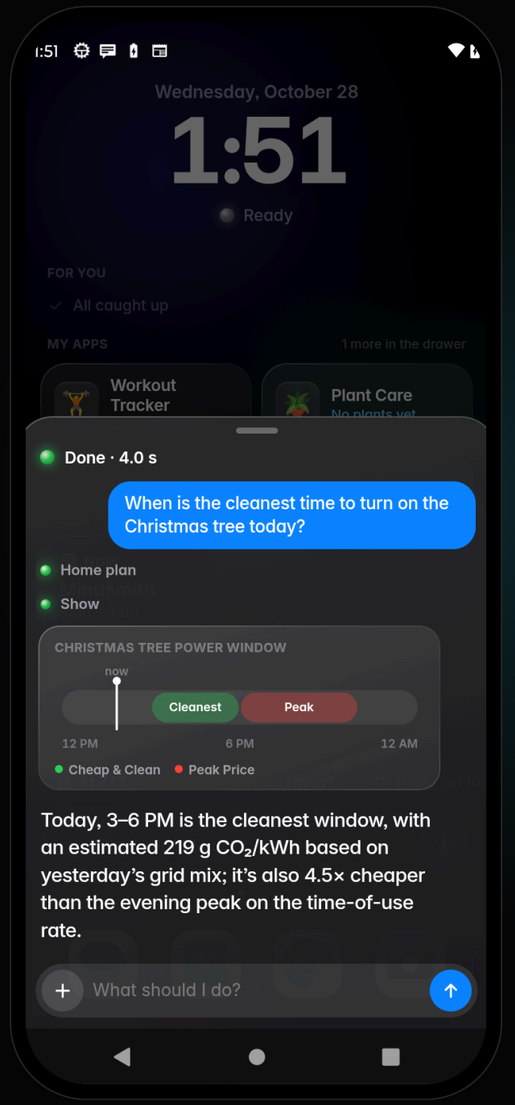

CUE "Show me my sleep this week." Let the chart land, then move on.

Your home, on clean power

Grid-aware smart home

Knows the devices

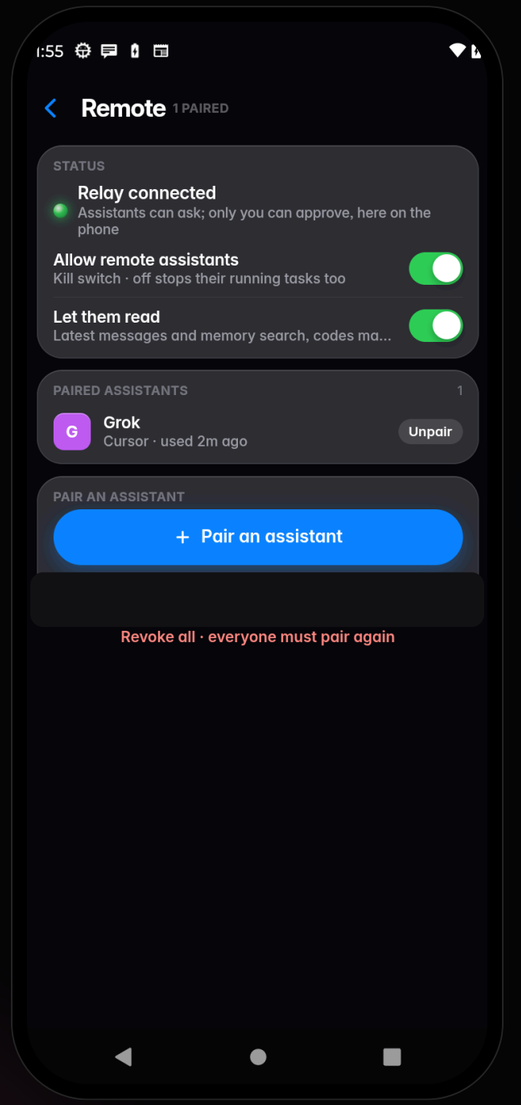

Cleanest window, on a timeline

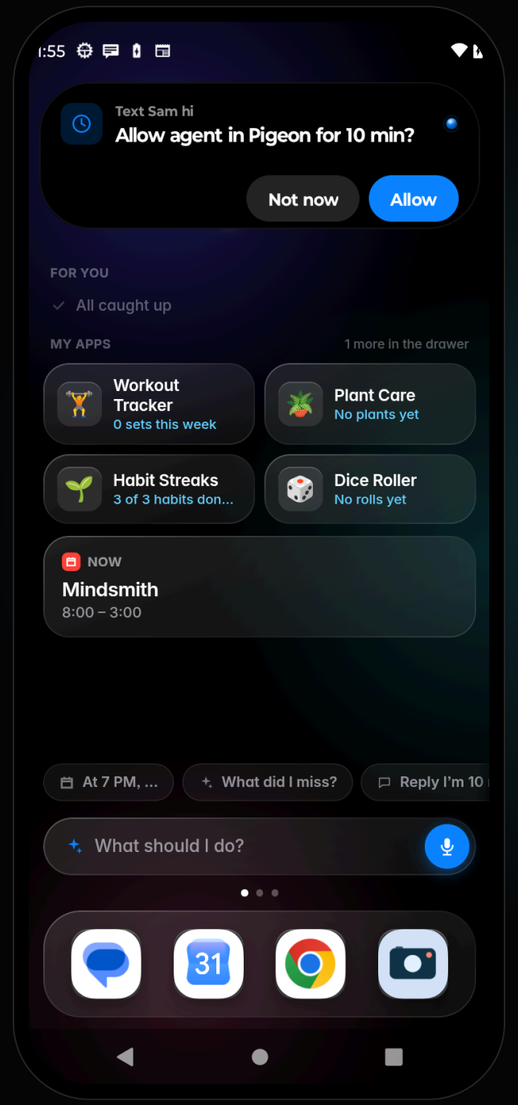

CUE "What smart home devices do I have?" → "When's the cleanest time to turn on the Christmas tree?"
Torus angle. Say "knows", not "controls".

Grok drives. You approve.

Remote assistants over MCP + leases

- Paired, with a kill switch

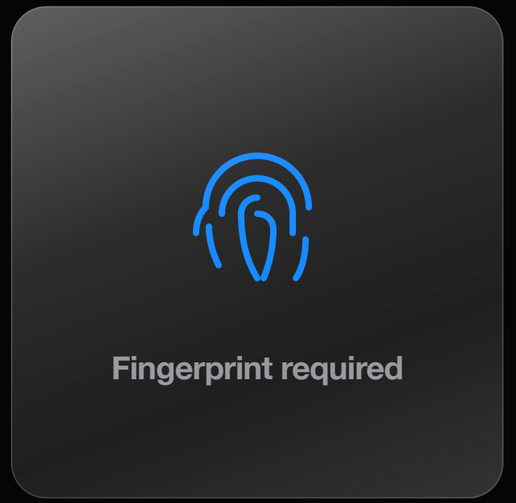

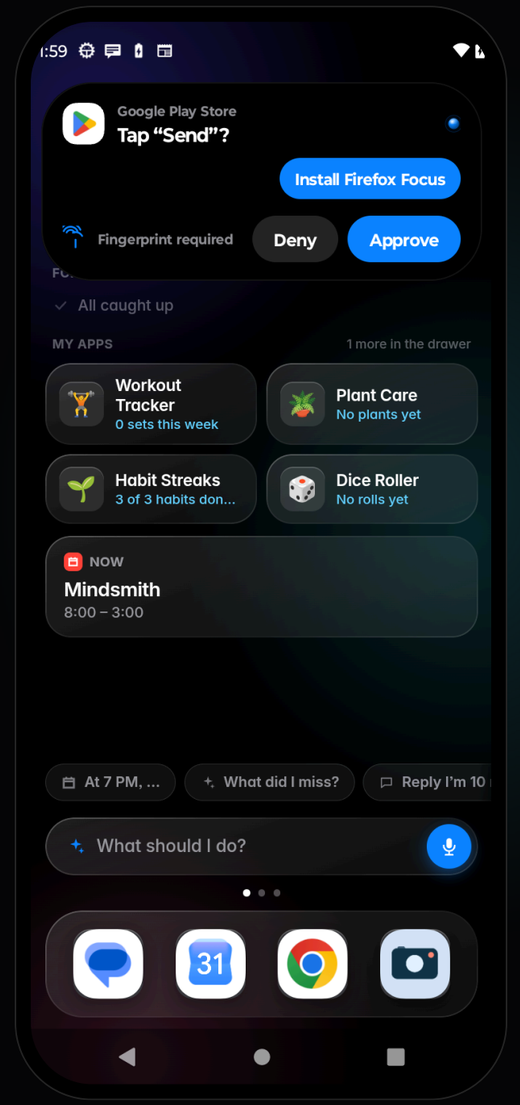

- Only your finger says Allow

CUE Laptop, Grok: "Use AgentOS: open LinkedIn." Then "...and text Sam hi": the card lands on the phone, not in Grok.

Fingerprint for money and installs

Fingerprint approvals · Android Keystore

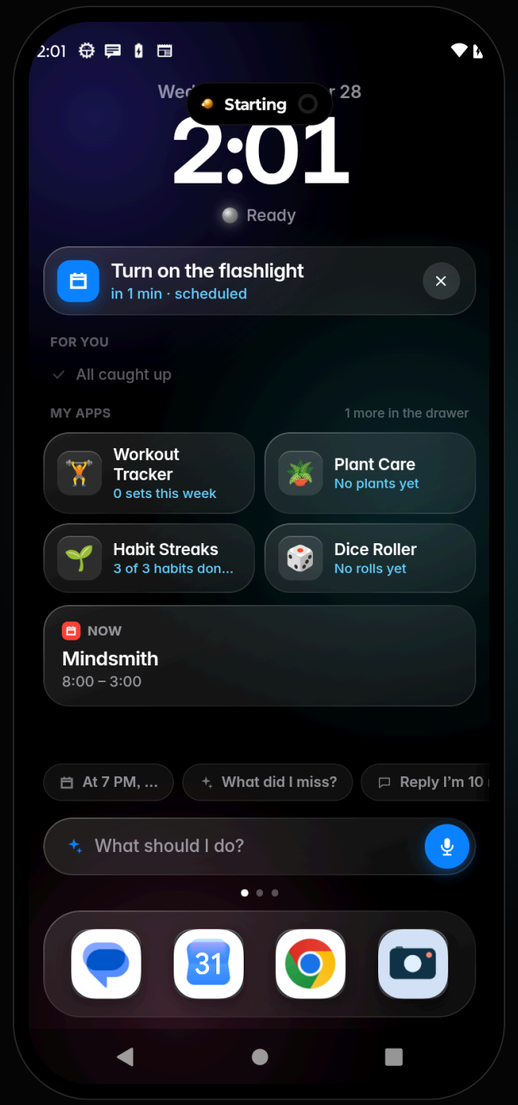

- Native card, not a web view

CUE "Install <small free app>" → Fingerprint required card. The system prompt shows black on mirroring: hold the phone up.

Locked phone. Still working.

Scheduled tasks + auto-unlock

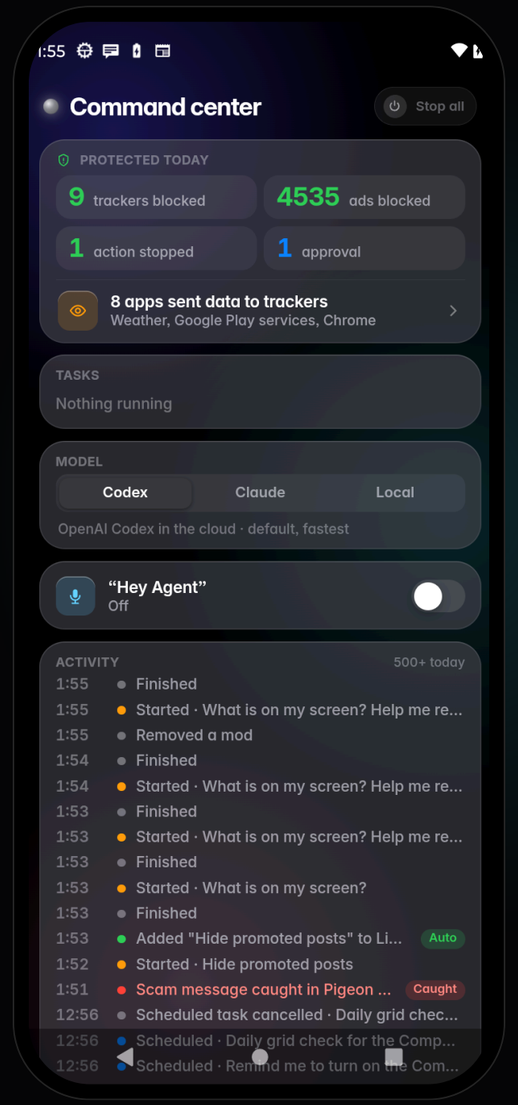

● Scheduled, shown on Home

CUE "In one minute, turn on the flashlight" → lock it, face up. Talk security during the minute (next slide).

Security in one breath

Security built into the OS

- AI only asks
- Approval cards
- Fingerprint
- Auto-approval
- AI can't run code
- Can't see its own cards
- Screen text is untrusted
- Prompt Guard 2 on device
- Scam detection
- Temporary leases
- Permissions & plugins
- Trackers & ads blocked
- Activity log
- Password vault

● Command center · Protected today

CUE Swipe to Command center while the flashlight timer runs. Protected today → Activity → Permissions → Blockers.

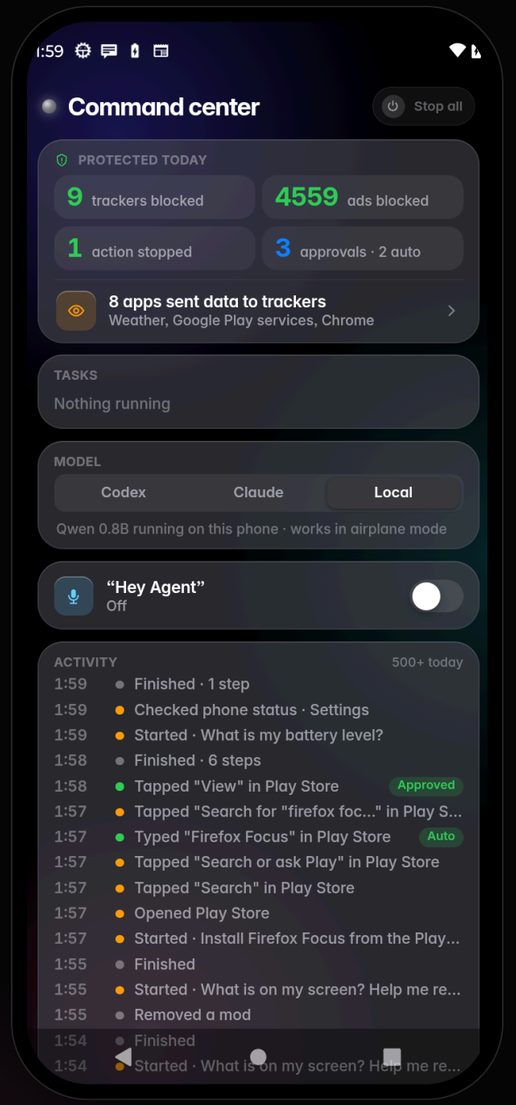

Three brains. Works offline.

Model switch + on-device fallback

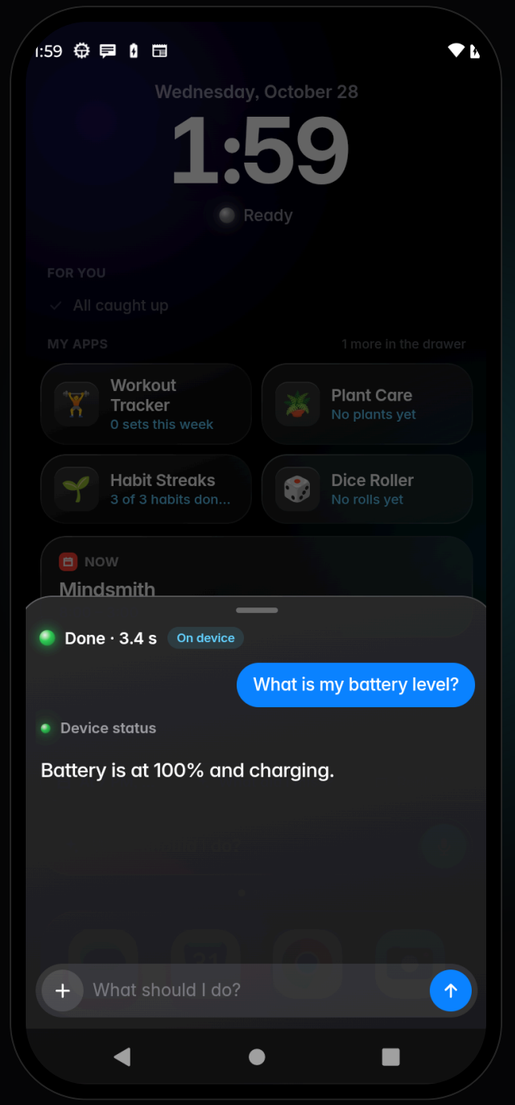

Codex
OpenAI, in the cloud

Claude
same tools, same rules

On device
Qwen 0.8B, no signal

● Switch brains in a tap

● Answered "On device"

CUE Command center › Model: tap Codex / Claude / On-device. Airplane mode on → "Turn on the flashlight" → "On device" tag.

The model proposes.
The OS decides.

Sources & data

Where the demo's data and claims come from

DATA IN THE DEMO

Grid & energy · U.S. EIA Open Data, API v2: hourly demand and fuel mix for PacifiCorp East (balancing area PACE, Utah). Carbon intensity is our estimate from the generation mix. Prices: Rocky Mountain Power Utah Schedule 1 time-of-use tariff, effective Aug 10, 2026.

Health · the founder's own Samsung Health export (Galaxy Watch4), imported with consent and stored on the phone.

Smart home · the founder's Google Home device list (owner-provided). The agent reads it; it never switches devices.

Built on · Moto G 5G (2023), Android 13, rooted with Magisk.

MODELS

OpenAI Codex (gpt-6.1-terra) and **GPT Live** voice, through the founder's ChatGPT subscription.

Claude, through Claude Code.

On device · Qwen3.5-0.8B on llama.cpp (llama-server), no network.

Meta Llama Prompt Guard 2 (22M), on device through ONNX Runtime. Llama license.

RESEARCH & CLAIMS ON EARLIER SLIDES

Open-source Android agents each fell to at least 6 of 7 published attacks: arXiv 2607.00333 (Zhang et al., Jul 2026). SECONDARY

Today's flagship phone agent: partner apps only, cloud-only: 9to5Google, Mar 12, 2026. REPORTED

About 45 s to order one ride: a single hands-on review (gimmie.ai, Aug 2026). REPORTED, UNVERIFIED

"AI must be human-guided": Gov. Cox, Utah Pro-Human AI principles (prohumanai.utah.gov).

Frameworks we follow: Meta's Rule of Two (Oct 2025) and DeepMind's CaMeL (arXiv 2503.18813).

CUE Leave it up for Q&A.
