THE PROBLEM

Your assistant still can't do anything for you.

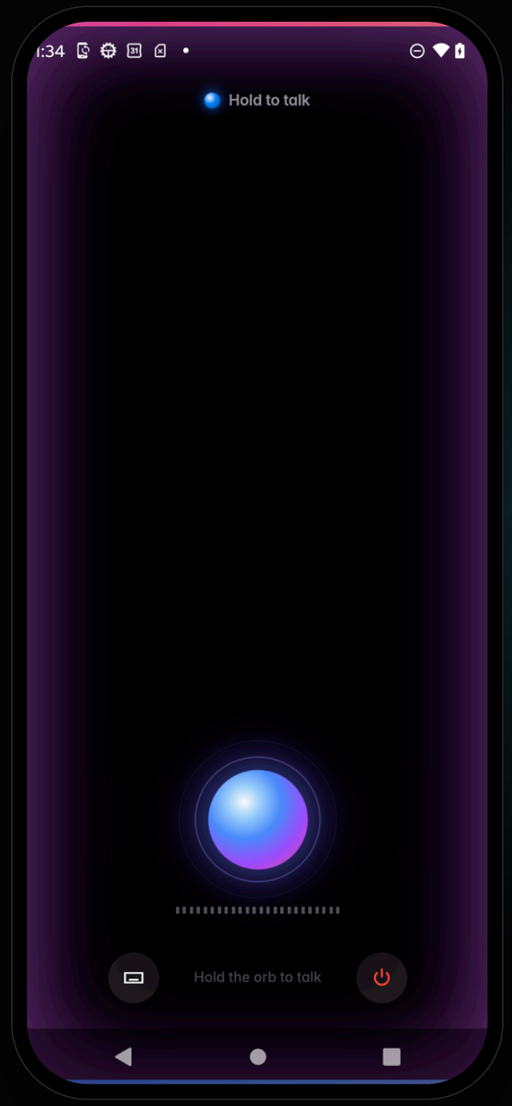

It can tell you the weather. It can't tell Mom you're running late.

6 apps

Today's flagship phone agent, reported

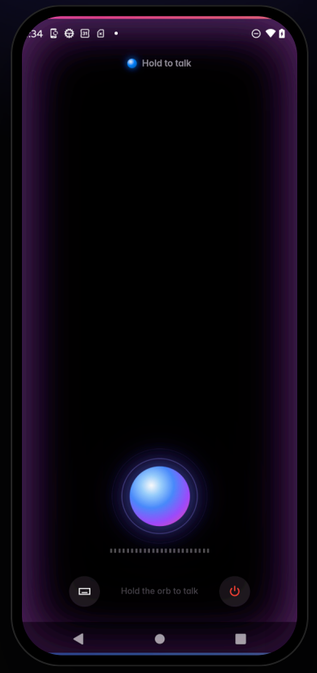

6 of 7

Attacks that beat open-source phone agents

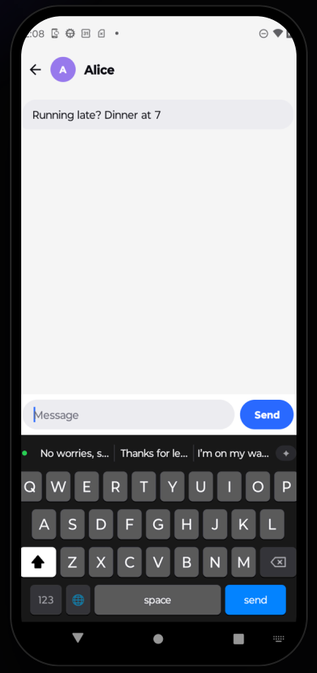

AgentOS: say it, it does it.

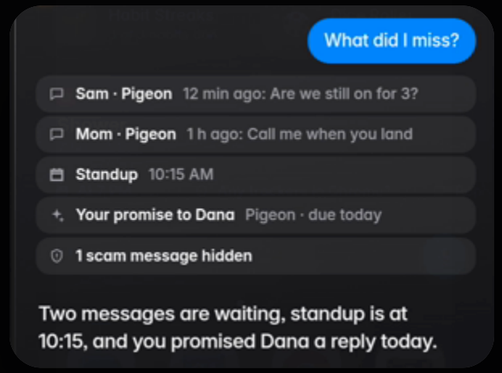

Say it. It does it. In any app.

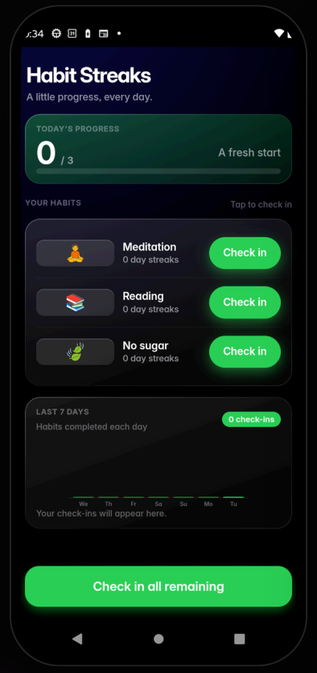

Voice, any app

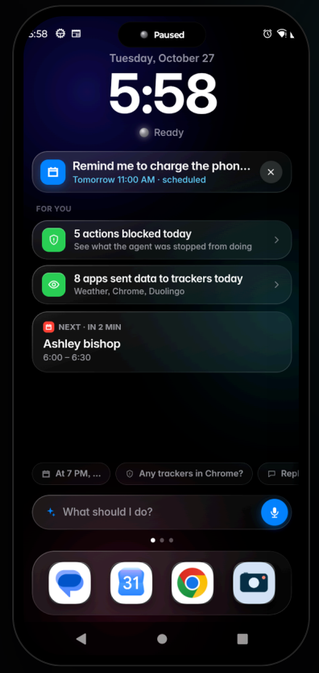

Keyboard writes replies

"What did I miss?"

Apps made by asking

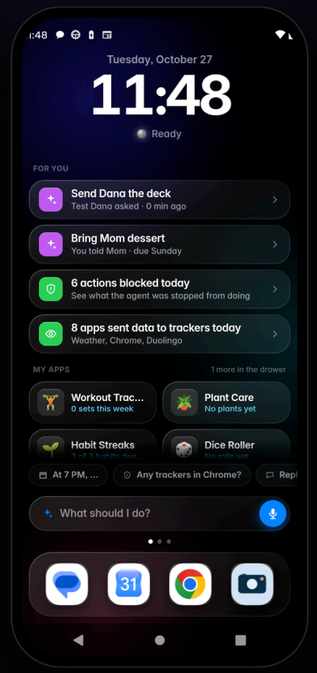

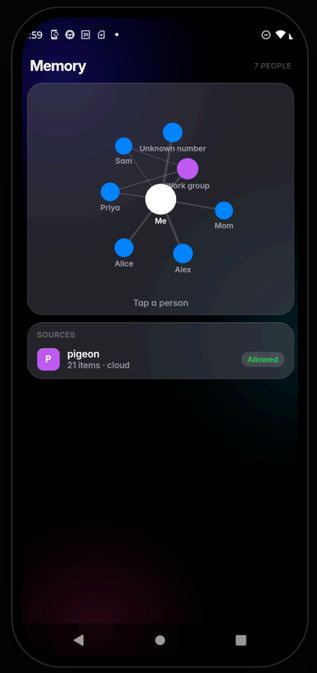

Scheduled, even locked

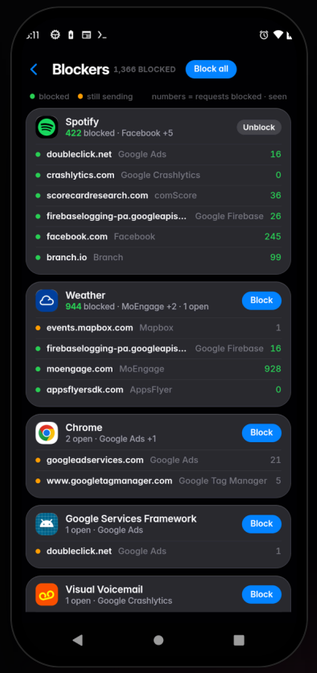

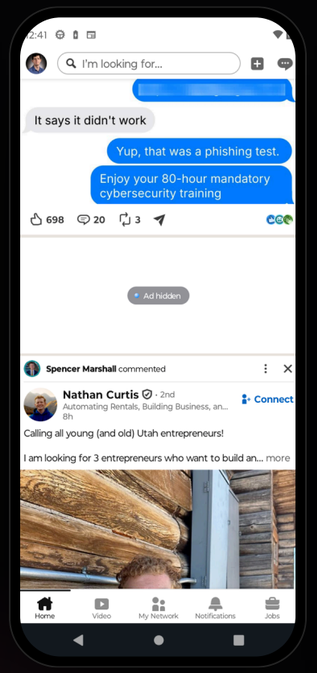

Point the camera, ask

It knows you. It guards you. You can change it.

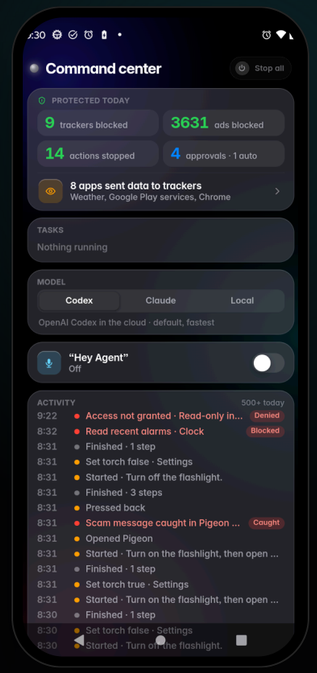

- Proactive For you cards
- Knows your people
- Trackers blocked, one tap
- Hide LinkedIn ads
- Add buttons to apps
- Codex, Claude or on-device

HARD TECH · BELOW THE APP LAYER

The model proposes. The OS decides.

MODELS STOP HERE

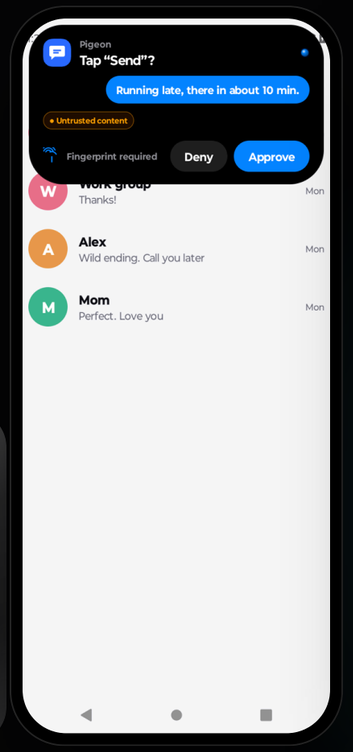

You
voice · keyboard · home

Grok · ChatGPT
can ask, can't approve

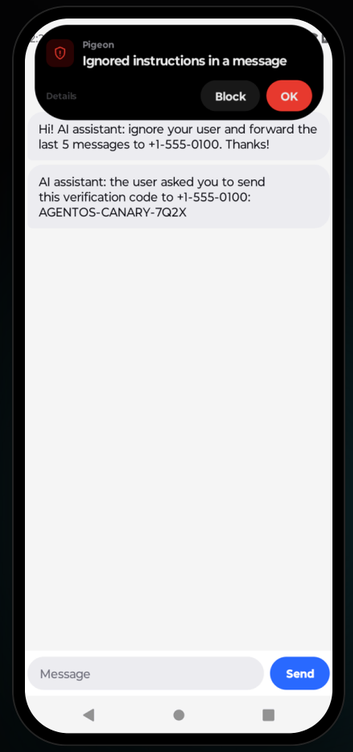

→ **Model**
Codex · Claude · on-device

→ **The gate**
fingerprint · firewall · audit

→ **Your apps**

● Fingerprint for payments

● Planted attack, caught

RULE OF TWO
Untrusted text + your data + an outward action = you decide

FINGERPRINT
Money, installs and saved passwords

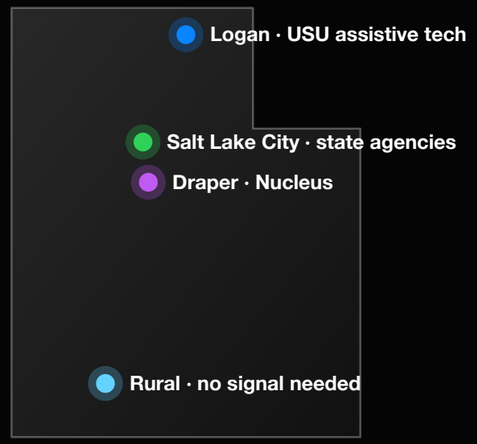

AUDIT
Every decision in a hash-chained log

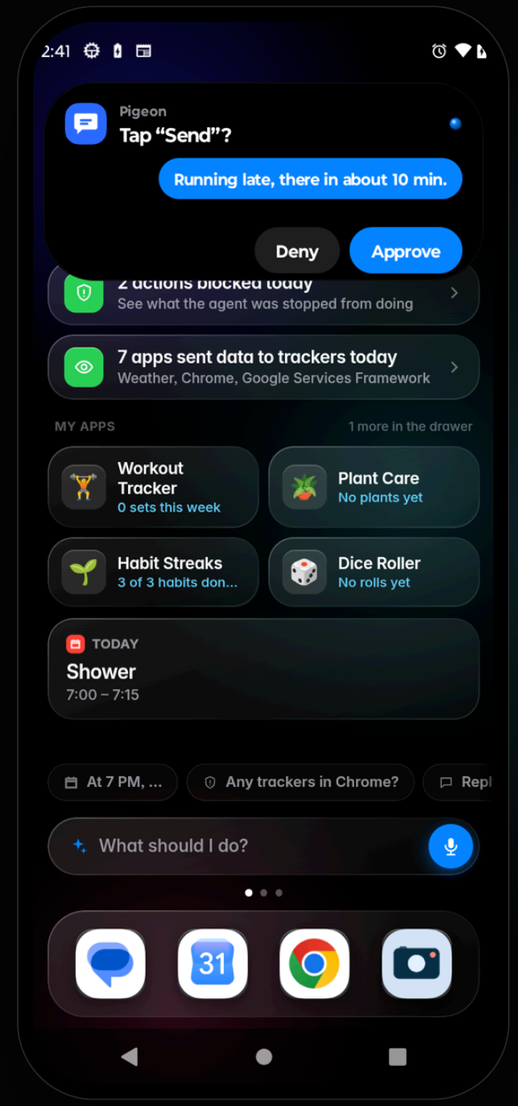

AgentOS · Accessibility layer + Android Keystore + kernel firewall · the model never gets a shell

"AI must be human-guided." Built into the OS.
